RIYA RAKHOLIYA

Software Engineer | React | Next.js | Node.js | Java/Spring Boot | Python | AWS
Maryland, USA | (857) 395-8126 | riyarakholiya8610@gmail.com | linkedin.com/in/riya-rakholiya

SUMMARY

Software Engineer with 3+ years building full stack applications: React, Next.js, and Node.js front ends on Java/Spring Boot and Python RESTful APIs, microservices, and Kafka event-driven systems. Experienced in API design, authentication and RBAC, MongoDB data modeling, LLM agents (LangGraph, MCP), automated testing, Docker, CI/CD, AWS serverless, and code reviews.

WORK EXPERIENCE

Optimoz Inc., MD | Jun 2025 – Present
Software Engineer

- Fixed forced SSO re-logins across 5 Next.js apps by designing refresh-token rotation in a Spring Boot authentication service and shared session module with cross-tab locks.
- Eliminated secrets duplicated in every workflow by designing org-, team-, and user-scoped variables across 6 microservices, with AES-encrypted RESTful APIs, Kafka events, and React UIs.
- Delivered a full stack onboarding feature, building a reusable React guided-tour engine and a policy-secured Spring Boot REST API serving 11 tours without third-party libraries.
- Extended developer-portal API key management to team-published workflows across 2 services, adding input-validated key bindings in Spring Boot and a React selection UI.
- Launched a force-OCR option for scanned PDFs spanning 4 microservices: React UI, Python API with Pydantic validation, Kafka event topics, and authorization policies.
- Repaired broken markdown in streamed chatbot replies by migrating the Python backend and 2 React clients to real-time Server-Sent Events (SSE) with a buffered parser.
- Corrected inverted permission checks by consolidating role-based access control (RBAC) into VIEW/MGMT policy pairs via 45 idempotent MongoDB migrations, preserving every user's access.
- Routed chatbots onto LangGraph ReAct LLM agents with tool-calling allow-lists, per-bot model selection, guardrails, and an atomic 20-interaction session cap (HTTP 429).
- De-risked merging 2 chat-widget codebases into 1 by writing 127 Vitest unit and Playwright E2E/visual regression tests, with CI/CD across GitHub Actions, Jenkins, and Docker.
- Remediated 100% of npm audit security vulnerabilities across 7 front-end repositories by consolidating Dependabot updates, scoping overrides, and removing 5 unused or deprecated packages.

Optimoz Inc., MD | Jun 2024 – May 2025
Software Engineer Intern

- Streamed real-time LLM responses via Server-Sent Events through a Node.js/Express API proxy, adding stop-generation that preserves partial output and a 60-second request timeout.
- Developed a serverless Python REST API with AWS Lambda and Amazon API Gateway, handling HTTP requests with structured responses.
- Built a Manifest V3 Chrome extension letting users chat with any webpage or Gmail message through the company LLM platform, using 3 coordinated components.
- Implemented SSO authentication with JWT expiry checks and capped retries, plus 2 context-menu entry points and a keyboard shortcut for page or selected-text chat.

Microtech Outsourcing Services LLP, India | Jul 2021 – Jul 2022
Software Developer

- Shipped 2 client Android apps (Deli Order, Restaurant POS) to Google Play in Java and XML, owning the SDLC from requirements through testing and release.
- Designed mobile UI screens and XML layouts for 2 client apps, debugging and fixing defects in Android Studio before each release.
- Integrated a database into each of the 2 apps for data storage, refining features and UI through client feedback cycles before release.

SKILLS

- **Programming Languages:** JavaScript, TypeScript, Java, Python, HTML/CSS, Object-Oriented Programming (OOP)
- **Backend:** Node.js, Express, Spring Boot, Spring Security, Spring Cloud Gateway, RESTful APIs, Microservices, Server-Sent Events
- **Frontend:** React (Hooks, Context, Redux), Next.js, Tailwind CSS, Vite, React Hook Form, Zod, Chrome Extensions
- **AI & LLM:** LangGraph ReAct Agents, Tool Calling, Model Context Protocol (MCP), Vector Search, Prompt Engineering, Guardrails
- **Security & Identity:** Authentication, SSO, JWT, Token Rotation, Role-Based Access Control (RBAC), BCrypt, AES Encryption
- **Databases & Messaging:** MongoDB (NoSQL, Data Modeling, Mongock Migrations), Apache Kafka, Event-Driven Architecture
- **Cloud & DevOps:** AWS (EC2, S3, Lambda, IAM, API Gateway), Docker, CI/CD, GitHub Actions, Jenkins, Git, Agile/Scrum
- **Testing:** Vitest, Playwright, JUnit 5, Mockito, pytest, Unit Testing, E2E Testing, Regression Testing, Debugging

EDUCATION

M.S. Information Technology/Data Analysis | University of Massachusetts Boston | Sep 2022 – May 2024
B.E. Computer Engineering | Gujarat Technological University | Jul 2017 – Jun 2021
